

## Key vocabulary

Factors and multiples are different things. But they both involve multiplication: Factors are what we can multiply to get the num-
ber. Multiples are what we get after multiplying the number by an integer (not a fraction).

Numerator-The top number in a fraction.
Denominator-The bottom number in a fraction.

Equivalent fraction-Fractions which have the same value, even though they may look different. Example 1/2 and 2/4 are equivalent, because they are both "half" .

Acute angle-An angle less than $90^{\circ}$ is acute.
Obtuse angle-An Obtuse Angle is more than $90^{\circ}$ but less than $180^{\circ}$

Children should be able to multiply and divide whole and decimal numbers by 10 and 100
