

Maths Wednesday

Converting from mixed numbers to improper fractions

$3 \frac{2}{4}$

$\frac{14}{4}$

$3 \times 4 = 12$

$\frac{14}{4}$

How many of the denominator are there? 3 lots of 4, plus the 2 in the numerator place.

Simple - Multiply the whole number by the denominator, add the numerator. Write as a fraction. (BIG x bottom, add to the top!)

**Big times bottom, add the top.**

Converting from mixed to improper

$5 \frac{0}{4}$

**Big times bottom, add the top.**

$$5 \times 4 = 20 = \frac{21}{4} \checkmark$$

$$4 \overset{3}{\underset{5}{\curvearrowright}} \quad 20+3 = \frac{23}{5}$$

**Big times bottom, add the top.**

$$5 \overset{4}{\underset{7}{\times}} \quad 5 \times 7 = 35 + 4 \quad \frac{39}{7}$$

Sheet on websiteL.O.: I can convert from mixed numbers to improper fractions**(BIG x bottom, add to the top)**

$$7 \times 3 = 21 \text{ (BIG x bottom)}$$

$$\text{Add 1 (numerator)} = 22$$

$$\text{so} = \frac{22}{3}$$

$$1) \ 7\frac{1}{3} = \underline{\quad}$$

$$2) \ 7\frac{9}{10} = \underline{\quad}$$

$$3) \ 7\frac{3}{4} = \underline{\quad}$$

$$4) \ 2\frac{1}{2} = \underline{\quad}$$

$$5) \ 8\frac{4}{7} = \underline{\quad}$$

$$6) \ 2\frac{3}{5} = \underline{\quad}$$

$$7) \ 3\frac{5}{8} = \underline{\quad}$$

$$8) \ 6\frac{7}{9} = \underline{\quad}$$

$$9) \ 9\frac{1}{8} = \underline{\quad}$$

$$10) \ 6\frac{2}{5} = \underline{\quad}$$

$$11) \ 4\frac{1}{3} = \underline{\quad}$$

$$12) \ 2\frac{2}{3} = \underline{\quad}$$

$$13) \ 8\frac{1}{2} = \underline{\quad}$$

$$14) \ 4\frac{3}{10} = \underline{\quad}$$

$$15) \ 8\frac{4}{5} = \underline{\quad}$$
